

## "How to order an EntryLevel™ Landing"

Step 1: Determine the height of the threshold. Make sure to measure at three locations:

- \* The hinge-side
- \* The strike-side
- \* The center of the door

Please Note: Often these will be the same height, however if they are slightly different, choose the lowest of these three measurements (you can always use shim-stock to build-up where necessary).

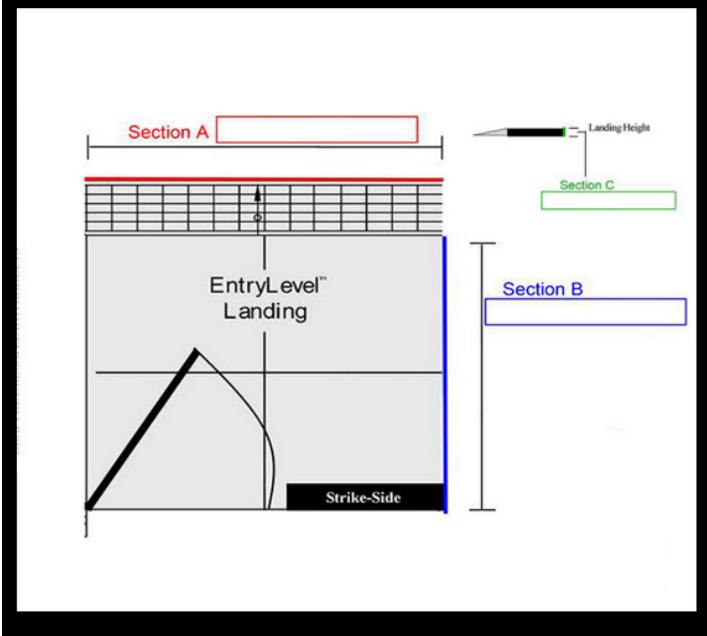

Step 2: Determine the type of landing and approach your project requires.

There are three basic types of landing configurations.

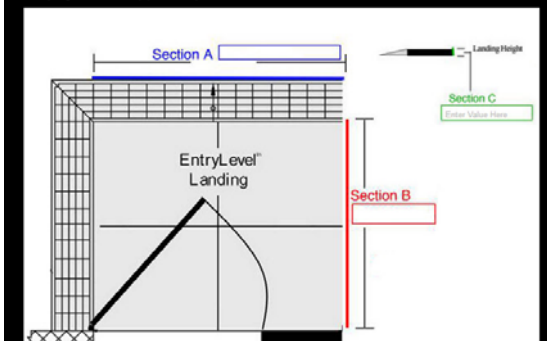

- \* One-sided
- \* Two-sided
- \* Three-sided

Please Note: In most cases a three sided landing is required, however, there are instances where a structural impediment exists, like a wall or curbing where side ramps are not needed (please see our [Design Tool](#) for more options).

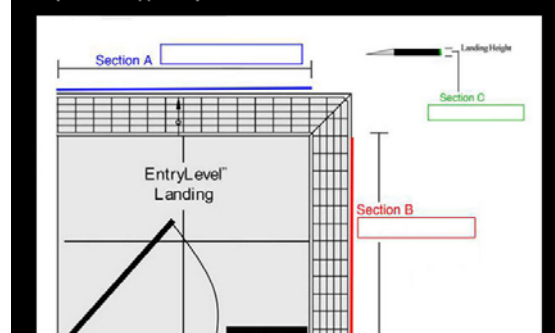

**One Sided Entry-Level Landing  
(Front Approach)**

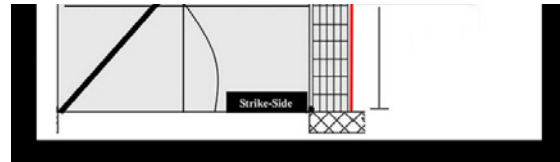

**Two Sided Entry-Level Landing  
(Right Side Approach)**

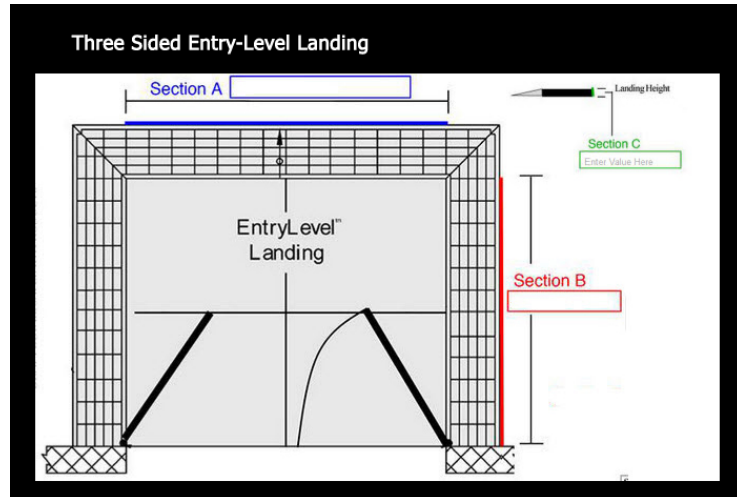

**Two Sided Entry-Level Landing  
(Left Side Approach)**

Step 3. Now that the height has been determined, next you will specify the

- \* Length  
(From side to side) &
- \* Depth  
(From front to back)  
of the maneuverable level surface.

Please Note: Per federal guidelines for safe accessibility, the measurement of the level surface area is typically:

- \* 60"(L) x 48"(D)
- \* 60"(L) x 60"(D)
- \* 60"(L) x 72"(D)

However, custom sizes are available.

The dimensions listed above satisfy most single and double door configurations. There will be instances that require custom sizes. Simply contact our in-house EntryLevel™ Landing experts for assistance.

To order an EntryLevel™ Landing, follow the three steps above, then select the SKU that fits your needs... Don't forget that in addition to black, we also have [six color options](#) to choose from.
